The present amino acid sequence is the rat GABA (gamma amino butyric acid) -B-R2 receptor protein, isolated from rat hypothalamic cDNA library. This sequence is used to construct the plasmid BD-55 (ATC. No. 209104). GABA-B is a major inhibitory neurotransmitter, the receptors of which are widely distributed throughout the central nervous system. GABA-B-R2 receptor has anticonvulsant, antiasthmatic, uropathic, analgesic, antitussive, antiaddictive, nootropic and neuroprotective activity. GABA-B-R2 receptor agonists may used to treat spasticity, asthma, incontinence, drug addiction, Alzheimer's disease, decrease nociception and as an antitussive agent. Transgenic animals with altered GABA-B-R2 levels may be used to determine the physiological effects of varying levels of GABA-B-R2 receptor activity.

This invention describes a novel protein heteromer, containing at least a GABA-B receptor protein and at least a protein (A) or a sequence which has a substitution, inversion, insertion or deletion of one or more amino acid residues and which retains the biological activity of the protein heteromer and which has neuroprotective activity. The encoding nucleic acid (I), the construct, (A) or the protein heteromer are useful for identifying proteins (or nucleic acids encoding such proteins) that show specific binding affinity to (A) or the protein heteromer. The two-hybrid

```
system or blochemical methods can be used to identify interaction domains of metabotropic receptors and use for pharmacotherapeutic intervention. Structural information from the protein or protein complex is useful for identifying and manufacture of substances which have specific binding activity to the protein or protein complex. The protein heteromer and (A), or fragments of these are useful as antigens to generate specific monor or polyclonal antibodies. (I) is useful for identifying and isolating homologous sequences, as a marker for human disease and for gene therapy. The methods can be used to identify substances, which bind to (A) or (I) and that cause inhibition or activation of functional effects of the GABAergic signal messages in neurons of the central nervous system. The method can also identify substances that inhibit or amplify interactions of (A) with other metabotropic receptors or analysis of the interactions of (A) and GABA-B receptors is important or identifying potential active substances against diseases such as collections of continential active substances against diseases such as epilepsy, stroke and psychological diseases such as stress, manic depression, schizophrenia, migraine and others. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20;

                                                                                                                                                                                                                                                                          receptors are metabotropic receptors that modulate synaptic transmission in brain. GABABR2 is closely related to GABABR1a and GABABR1. GABABR2 polypeptides are produced using recombinant nucleic acid techniques. They are used to raise antibodies and to identify specific modulators of GABABR2. These modulators are useful for treating spasticity, motor control disorders etc. The antibodies are used as therapeutic modulators, for GABABR2 quantification, affinity purification and to study synthesis, structure and function of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   685

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method for determining whether a substance binds to gamma-amino-butyric acid (GABA)-B receptors and is potential agonist or antagonist of the GABA-B receptor. The method comprises exposing cells to 1-(aminomethyl)cyclohexaneacetic acid (gabapentin) in the presence or absence of the substance under investigation. The present sequence is human HG20, which was used in present invention to construct a functional GABA-B receptor, for use the method of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    58 imglmpltkevakgsigrgvlpavelaieqirnesllrpyfldlrlydtecdnakglkaf 117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             274

The present sequence is human gb2 GABA B receptor subunit. Human gb2 (Hgb2) shares sequence homology with rat GABA B receptor rgb1, parathyroid cell calcium-sensing receptor and metabotropic glutamate receptors. It can be produced in host cells by transforming them with recombinant express the receptor are used in the development of drugs for treatment of neurological and psychiatric disorders, for pharmacological, physiological, functional, or other investigational analysis of ability of a chemical to bind to a mammalian gb2 GABA B receptor, its agonists or antagonists and for determining the ability of a chemical to bind to a mammalian gb2 GABA B receptor in vitro. They may also be used for the preparation of antibodies to hgb2 which can be used in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New GABAB (c-aminobutyric acid or 4-aminobutanoic acid) receptor, useful for identification of (ant)agonists and for treatment of

GABA-B is a major inhibitory neurotransmitter, the receptors of which are widely distributed throughout the central nervous system. GABA-B-R2 receptor has anticonvulsant, antiasthmatic, uropathic, analgesic, antitussive, antiaddictive, nootropic and neuroprotective activity. GABA-B-R2 receptor agonists may used to treat spasticity, asthma, incontinence, drug addiction, Alzheimer's disease, decrease nociception and as an antitussive agent. Transgenic animals with altered GABA-B-R2 levels may be used to determine the physiological effects of varying levels of GABA-B-R2 receptor activity.

Note: This sequence is an alternative version of the human GABA-B-R2 receptor protein sequence given in Fig. 5 (AAY70326).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ydaikygpn--hlmvfggvcpsvtsiiaeslggwnlvqlsfaattpvladkkypyffrt 175

This invention describes a novel protein neteromer, containing at least a protein of the invention by protein neteromer. The which retains the biological activity of the protein heteromer. The protein of the invention has neuroprotective activity and can be used for gene therapy. (A) or the protein heteromer activity and can be used for gene therapy. (A) or the protein heteromer as the two-hybrid system or biochemical methods can be used to identify interaction domains of metabotropic receptors and use for pharmacotherapeutic intervention. Structural information from the protein complex is useful for identifying and manufacture of substances which have specific binding activity to the protein of substances which have specific binding activity to the protein of substances, when the protein complex. The protein long activity to the protein or protein complex. The protein heteromer and (A) or flagments of these are useful as antigens to generate specific monor or polyclonal antibodies. The encoding nucleic acid (I) is useful for identifying and isolating homologous sequences, as a marker for human diseases and for gene therapy. The methods can be used to identify substances, which bind to (A) or (I) and that cause inhibition or activation of functional effects of the GABAergic signal messages in neurons of the central nervous system. The method can also identify substances that inhibit or amplify interactions of (A) with other metabotropic receptors or interactions of (A) with G-proteins or other signal cransdoction molecules. The amplify interactions of (A) with cancer or (A) or interactions of (A) with G-proteins or other signal cransdoction molecules. The analysis of the interactions of (A) and GABA-B receptors is important for identifying potential active substances against diseases such as epilepsy, stroke and psychological diseases such as striscal and protein and others. The method can also precent and protein and others the method recovers the protein and other recovers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of
                                                                                                                                                                                                                                                                                                                                                                                                                                                     A novel metabotropic receptor complex from the central nervous system, related coding sequences and methods of identifying binding substances, ligands and interactions with other proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel protein heteromer, containing at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence represents the human GABA-B receptor described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         VAPDSSHNPARIAFIRKFGWGTVTTFSQNEEVHSLAVNNLVTELEAANISCAATITFA-- 332

```
a GABA-B receptor protein and at least a protein (A) or a sequence which has a substitution, inversion, insertion or deletion of one or more amino acid residues and which retains the biological activity of the protein heteromer and which has neuroprotective activity. The encoding nucleic acid (I), the construct, (A) or the protein heteromer are useful for identifying proteins (or nucleic acids encoding such proteins) that show specific binding affinity to (A) or the protein heteromer. The two-hybrid system or biochemical methods can be used to identify interaction domains of metabotropic receptors and use for pharmacotcherapeutic intervention. Structural information from the protein or protein complex is useful for identifying and manufacture of substances which have specific binding activity to the protein or protein complex is useful for identifying and manufacture of substances which have specific mono- or polyclonal antibodies. (I) is useful for identifying and isolating homologous sequences, as a marker for human disease and for selection or protein complex to the methods can be used to identify substances, which bind the continual continual antibodies. (I) is useful for identify substances, which bind the continual conti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        effects of the GABAergic signal messages in neurons of the central nervous system. The method can also identify substances that inhibit or amplify interactions of (A) with other metabotropic receptors or interaction of ligands with the protein heteromer or (A) or interactions of (A) with G-proteins or other signal transduction molecules. The analysis of the interactions of (A) and GABA-B receptors is important for identifying potential active substances against diseases such as epilepsy, stroke and psychological diseases such as stress, manic depression, schizophrenia, migraine and others. This sequence represents the human GABA-B receptor described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      containing at least

                                                                                                                                                                                           The present sequence is rat gb2 GABA B receptor subunit. Rat gb2 parable2) shares sequence homology with rat GABA B receptor rgb1, parathyroid cell calcium-sensing receptor and metabotropic glutamate receptors. It can be produced in host cells by transforming them with recombinant expression vector comprising rgb2 encoding cDNA. The cells that express the receptor are used in the development of drugs for treatment of neurological and psychiatric disorders, for pharmacological, physiological, functional, or other investigational analysis of gb2 GABA B receptor, its agonists or antagonists and for determining the ability of a chemical to bind to a mammalian gb2 GABA B receptor in vitro. They may also be used for the preparation of antibodies to rgb2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               565

The present sequence represents a human gamma-amino-butyric acid (GABA) B receptor (GABABR) subunit designated HG20. The present invention also describes the GABABR subunit designated GABABRIA cells expressing the new receptor subunits are useful for identifying GABABR agonists and antagonists. HG20 proteins and their antagonists are useful for inhibiting HG20 or GABABRR function, useful for treating depression, epilepsy, neuropsychiatric disorders, dementias, muscular contractions, and central nervous system disorders.
                                                                                                                                                                                                                 980 ELT-----VTSGISQTPAASK------NRTPSISG---ILPNLLLS 1011

GABA-B-R2 receptor agonists may used to treat spasticity, asthma, incontinence, drug addiction, Alzheimer's disease, decrease nociception and as an antitussive agent. Transgenic animals with altered GABA-B-R2 levels may be used to determine the physiological effects of varying levels of GABA-B-R2 receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HLKPELT------VTSGISQTPAASK------NRTPSISG---ILPN 1007

useful for treating drug addiction. Antagonists are used to treat Alzheimer's disease. Functional assays were not possible with GABABRI alone, so identification of a new GABABRZ polypeptide is useful for high throughput screening assays for agonists or antagonists against GABAB receptors using co-expression of GABABRI/R2. The pharmacological and signal transduction properties of the two receptors GABABRI and R2 match those of native GABAB receptors in the brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         --NRTPSISG---ILPN 1007

The coding region of GABA-B-R2 is cloned into the expression vector pEXJ.HRT3T7 and the plasmid is designated as TL-267 (AYCC No. 203515). GABA-B is a major inhibitory neurotransmitter, the receptors of which are widely distributed throughout the central nervous system. GABA-B-R2 receptor has anticonvulsant, anniasthmatic, uropathic, analgesic, antitussive, antiaddictive, nootropic and neuroprotective activity.

This invention describes a novel polypeptide (I), functioning as a gamma-aminobutyric acid -B (GABA-B) receptor which has insecticidal activity, (I), also the nucleic acid (II) that encodes it and related vectors, host cells, antibodies and transgenic invertebrates, are used for identifying: (i) new plant protection agents, i.e. modulators of (I) with insecticidal activity, which may also be useful in human or veterinary medicine; and (ii) genes that encode polypeptides involved in assembly of functionally related GABA-B receptors in insects. This sequence represents a fruitfly (Drosophila melanogaster) GABA-B receptor which is described in the method of the invention.

This sequence is the human gamma amino butyric acid, class B,

receptor 2 (GABABR2) polypeptide of the invention. The DNA can be used

cor the production of GABABR2, and for the design of probes that are

useful for detection of the DNA or homologues in a sample. Antibodies

capainst GABABR2 are useful for detecting GABABR2 and GABABR1/R2 on the

surface of cells. Transgenic mice expressing GABABR1/R2 are useful for

determining the physiological effects of varying levels of the receptors

con the presence of an inducible promoter which requiates the receptors

con the presence of an inducible promoter which requiates the receptors

con associated with the receptors. Recombinant cells expressing GABABR1/R2,

con membrane extracts from these cells, are useful for identifying

con membrane extracts from these cells, are useful for identifying

con membrane that specifically bind to the receptor. The cells can

also be used to determine whether the chemical compounds are antagonists,

caponists, activators or inhibitors. Agonists of GABABRI/R2 are useful for

treating spasticity, asthma, incontinence and decreasing nociception. The

gaonists can also be used as anti-tussive agents. Agonists are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GABABR2; gamma amino butyric acid class B receptor 2; spasticity; asthma; incontinence; decreasing nociception; anti-tussive agent; drug addiction; alzheimer's disease; therapy.

                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                       ö
                         This invention describes a novel polypeptide (I), functioning as a gamma-aminobutyric acid -B (GABA-B) receptor which has insecticidal activity. (I), also the nucleic acid (II) that encodes it and related vectors, host cells, antibodies and transgenic invertebrates, are used for identifying: (i) new plant protection agents, i.e. modulators of (I) with insecticidal activity, which may also be useful in human or veterinary medicine; and (ii) genes that encode polypeptides involved in assembly of functionally related GABA-B receptors in insects. This sequence represents a fruitfily (brosophila melanogaster) GABA-B receptor which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MRIIQPVQGTRYGPWPAVGL.....RLSLGDSQEEEQQAPANGTE 1305
